FRESH WATER UNDER THE SEA .- Ooe of the horrest regions on the carch is along the Persian Gulf, where little or no rain falls. At Babrin the arid shore has no fresh water, yet a comporatively numerous population contrive to live there, thanks to the copious springe which break forth from the bottom of the sea. The fresh water is get by diving. The diver, sining in his boat, winds a great goatskin bag around his left erm, the hand grasping its mouth; then takes in his right hand a heavy stone, to which is attached a strong line. Thus quipped he planges in and quickly reaches the bottom. Instantly opening the big over the strong jet of fresh water, he springs up the asoending current, at the same time closing the bag, and is helped aboard. The stone is then hauled up, and the diver, after taking breath, plunges in ugain. The source of the copious sub marine springs is thought to be in the green hills of Os nap, some five or six hundred miles

London. - London is spread over about 7,000 square miles. There is one death there every ex minutes, and one birth every four. To the jails there are an average of 75 000 prisoners. The foreign born residents of London number about 100,000; but 37 per cent, of the whole population were born out of the city.
